* _Adobe's Photoshop tutorial_ _Visit_ _# Getting an Image onto a Video Clip The term _video clip_ may remind you of _poster_ , a product of an age in which many would turn their still images into something with a small or nonexistent shelf life. They'd attach a letter or number to a strip of paper and staple or glue the image to it. When the poster had been printed and the desired audience had seen it, it was thrown away. Now, however, companies commonly mount images onto poster boards, which are posted in transit or at customer locations, and then repurpose those posters for wall displays after they've arrived. Obviously, you're not pulling posters off the wall and sticking them to paper, but you still need the same type of ready-to-use imagery. Images are found today on websites, in ad banners, in brochures, and on business cards. A nonartistic version of poster design, these images aren't particularly interesting to the eye, and they're not destined to find a home on a drawing board. But in the Web-happy world of today's corporate America, they're a much-used tool of commerce. Dedicated video cameras have their own form of the poster, and what you can do with a video clip depends on your creativity and technical skills. The process includes photographing an object, recording it onto a video clip, and then manipulating the resulting image. Once you take the photo, record the video, and combine the two, you've done it. The term _video clip_ doesn't refer to the video recording format itself. It means a visual component that serves the purpose of conveying information. As in poster design, you can include text — a simple line of dialogue or a longer sample, such as a 10-second section of a proposal. Although you can create a video clip with your favorite video camera, for starters, you can do it in Photoshop too. After you import the video file into Photoshop, you then find the photo, record it, and save the resulting Photoshop file. The last step is to assemble the two images, blend, and correct color. In theory, you can edit video clips in VideoStudio, but that's for an advanced user who has deep familiarity with Adobe Premiere Pro. ## Importing a Video File The first step in
